The Professionals' Choice

DocBuster® Smart Print

The smarter way to print documents
from CD, DVD, USB key or hard drive

Smart Printing with Millnet DocBuster® can save up to 90%* of print costs when printing electronic documents from CD, DVD, USB key or hard drive. Smart Print uses Millnet's patent-pending technology to identify duplicates and the further option of keyword search allows documents to be printed selectively.

- New, **FREE** Smart Print report highlights document and page counts, analysis of file types, duplicates percentage and estimated print costs
- Documents can be printed in chronological order or selectively within a range of dates, with or without email attachments.
- Why pay to print multiple copies of the same document? Smart Print eliminates the duplicates that can account for 30-70% of document volume
- Optional keyword search – print only documents that contain relevant keywords
- Print **EXCEL** spreadsheets with Smart Print's unique auto-formatting feature
- Automatic pagination and insertion of coloured & annotated slip-sheets between documents
- Optional electronic index of printed documents (including author, date and recipient) aids preparation of disclosure lists
- Documents can also be output in a variety of electronic formats suitable for further review and e-Disclosure.

Smart Print saves time, money and trees by eliminating the need to print duplicate and non-relevant documents. And when it comes to speed, Millnet's high-capacity digital process can print up to 100,000 pages in 24 hours, the equivalent of 200 lever arch files!
